

E-Clearance System Testing Flow

How to Run the System

- Open XAMPP Control Panel.
- Start MySQL and confirm that it is running.
- If the test database has not yet been prepared on the computer, open phpMyAdmin and import the provided loa_eclearance SQL database file.
- Open the E-Clearance System solution/project in Visual Studio.
- Wait for Visual Studio to finish loading the project and restoring required packages.
- Run the project by clicking the Start button or pressing F5.
- Wait for the E-Clearance Login screen to appear.
- Use the test account assigned to you (Administrator, Student, or Staff / Clearing Officer) and begin the testing flow below.

Before testing: Keep XAMPP MySQL running while the E-Clearance System is open.

System Testing Flow

1. Admin Login and Student Account Creation

- Log in using an Administrator account.
- Open the Students page.
- Create a new student account.
- Enter Student No., First Name, Last Name, Course, Year Level, Username, Password, and NSTP status if applicable.
- Save the student account.

Expected Result: The account is created successfully and the new student appears in the Students list.

2. Student Login and Clearance Loading

- Log out from the Admin account.
- Log in using the newly created student account.
- Open My Clearance.

Expected Result: The student can log in and sees the applicable departments and requirements for the active term.

3. Student Requirement Submission

- Choose one department, such as Library.
- Upload a valid screenshot or supporting file required by that department.
- Confirm the submission.

Expected Result: The file is uploaded successfully and the requirement status changes to Under Review.

4. Invalid Upload Validation

- Try an unsupported file type.
- Try a file larger than the allowed maximum size.
- Try submitting without selecting a file.

Expected Result: The system blocks invalid submissions and displays an appropriate validation message.

5. Staff Login and Assigned Office Check

- Log out from the Student account.
- Log in using a Staff / Clearing Officer account assigned to the same department.
- Open Requests.

Expected Result: The staff member can log in and sees only requests for the assigned department.

6. Review Submission

- Open the student request.
- Check the student details, requirement, submitted date, current status, and uploaded document.
- Open or preview the submitted file.

Expected Result: All displayed information is correct and the submitted file can be opened or previewed.

7. Approve / Clear Test

- Approve the submission.
- Check the Staff History.
- Log in as the Student and check the requirement status.
- Check the same student from the Admin side.

Expected Result: The status becomes Cleared and the action is reflected on the Staff, Student, and Admin sides.

8. Reject Test

- Create or submit another requirement for testing.
- Attempt to reject the request without remarks.
- Enter rejection remarks, then reject the request.

Expected Result: The system blocks rejection without remarks. After remarks are entered, the status becomes Rejected and the remarks are visible to the student.

9. Student Resubmission

- Log in again as the Student.
- Open the rejected requirement.
- Upload a corrected or replacement file.

Expected Result: The resubmission is accepted and the status returns to Under Review.

10. Department Access Control

- Log in as staff assigned to another department.
- Check the Requests and Review screens.
- Attempt to locate or open a record from another office.

Expected Result: Staff can only view and process records belonging to their assigned DepartmentID.

11. Search and Filter

- Search using a student name.
- Search using a student number.
- Test the status filters: All, Pending, Under Review, Cleared, and Rejected.
- Use Refresh.

Expected Result: The displayed records match the selected search term and filter.

12. Staff History

- Open Staff History.
- Select a processed clearance record.
- Review the action, student, status, remarks, and date/time.

Expected Result: The history details are complete and match the action performed by the staff member.

13. Admin Monitoring

- Log in as Admin.
- Open the test student record.
- Review clearance details and history.

Expected Result: Student submissions, staff approvals/rejections, and status changes are correctly reflected.

14. Logout Test

- Test Logout as Admin.
- Test Logout as Student.
- Test Logout as Staff.

Expected Result: Each role returns to the Login screen and the previous session is no longer accessible.

15. Start New Term - Perform Last

- As Admin, create or start a new academic term.
- Open the student account again.
- Check the newly generated clearance records.
- Check the previous term history.

Expected Result: New clearance records are created for the new term and old-term history remains preserved.

Issue Reporting Template

Use this section whenever a tester encounters a problem.

Field	Tester Entry
Module / Screen	
Test Performed	
Result	PASS / FAIL
Steps Before Error	
Expected Result	
Actual Result	
Error Message	
Screenshot / Evidence	
Tester Name	
Date Tested	

Suggested Testing Order: Admin Setup -> Student Submission -> Staff Review -> Approve/Reject -> History Verification -> Access Control -> Start New Term.

Perform Start New Term only after the other tests are completed because it changes the active academic term and may generate new clearance records.
